

André Andrade

M. Architecture Student

ABOUT ME

Master's student in Architecture at the University of Beira Interior (UBI), currently conducting research on the use of municipal solid waste as construction materials. Passionate about construction, history and maritime affairs, I aim to deepen my understanding of the appropriate use of building materials in architectural design, whether conventional or emerging, as well as those that remain rarely adopted.

Having spent many years building models for both architecture and personal projects, I have developed strong hands-on knowledge of construction and everyday materials through practical experience.

CONTACTS

Email andre.andrade@ubi.pt
Portfolio https://aga100kr.github.io/portfolio_aga/
