# Habitação

## Tipologia e captação pluvial

Para uma área das dimensões que possui (1 ha), a habitação foi desenvolvida após a consolidação da premissa de menor interrupção do ciclo da água do local, já que se desejava integrar as intervenções de forma a coabitarem com o ecossistema, tirando proveito da relação entre ambos.

Com tal, o estudo sobre Permacultura revelou-se deveras importante, embora complicado de traduzir em conteúdo para este curso, levando a soluções como a utilização do solo como meio de rega, a filtragem da água por meio natural, e o emprego de reservatórios de uso público (rega da vegetação, especialmente do Jardim), como de uso domiciliário (para uso de não consumo alimentar, para reduzir o uso da água da rede trancoense).

A resolução da habitação gerou uma coluna de tipologias de duplo piso e duas de piso único, todas as colunas interrompidas por um momento de acesso entre a cobertura destas.

# Flexibilidade

Se resultar mais proveitoso usar os edificios de habitação para outro fim, como o de oficinas de trabalho ou outro, a versatilidade que a estrutura oferece permite a adaptação ao novo programa.

# Pormenores construtivos

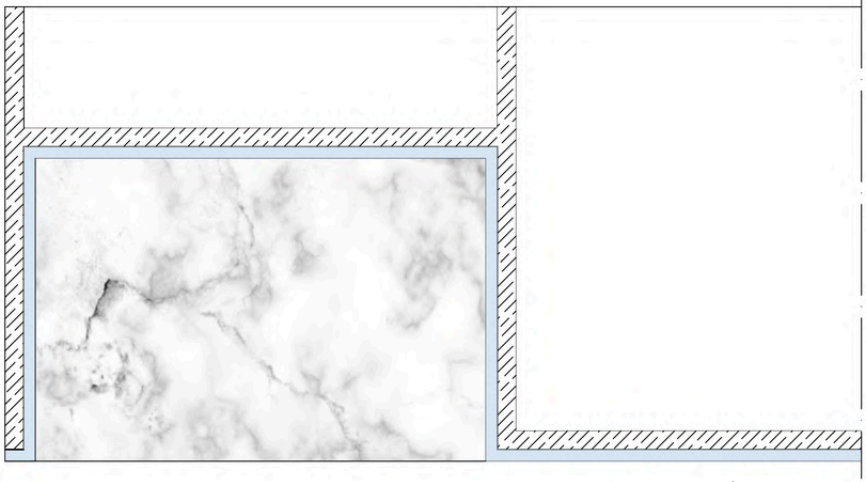
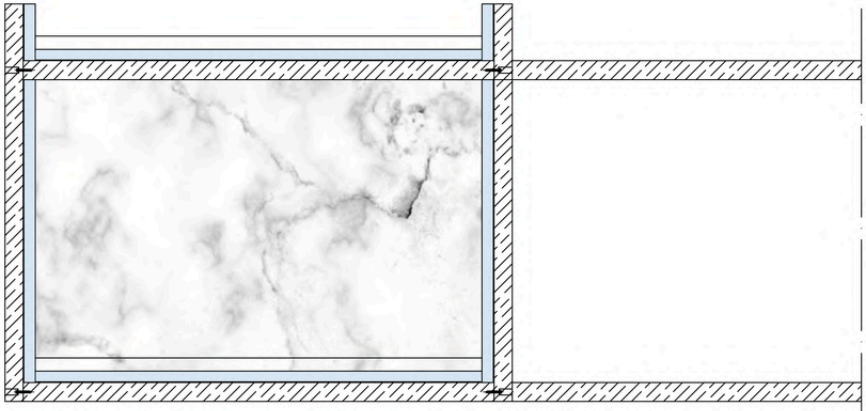
Escalas 1:10 & 1:5

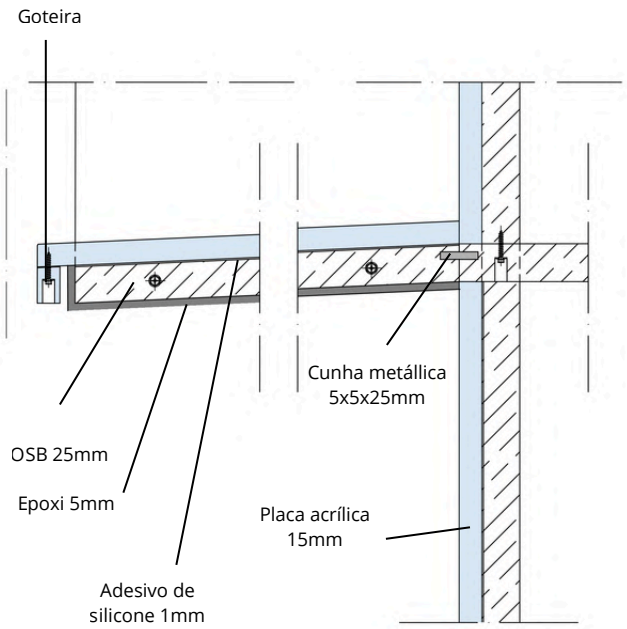
Armário de cabine de duche (marmoreado) e cozinha (branco), estrutura em OSB e acabamento em placa acrílica ou epoxi.

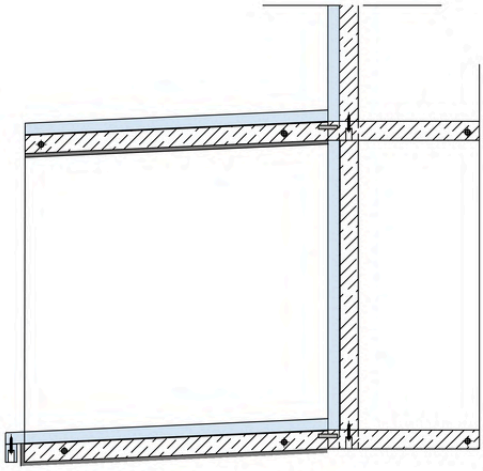


Planta

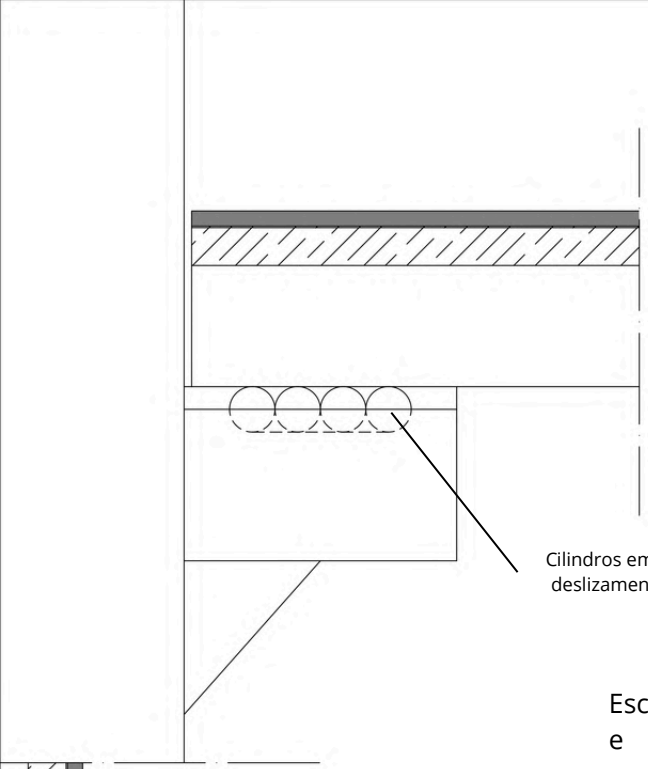


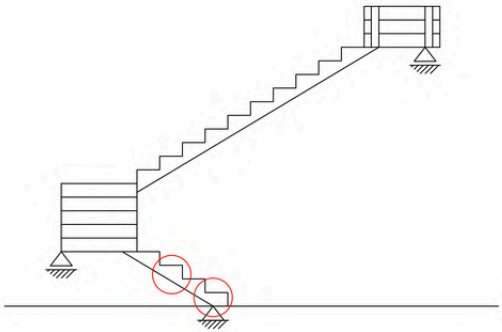
Secção vertical



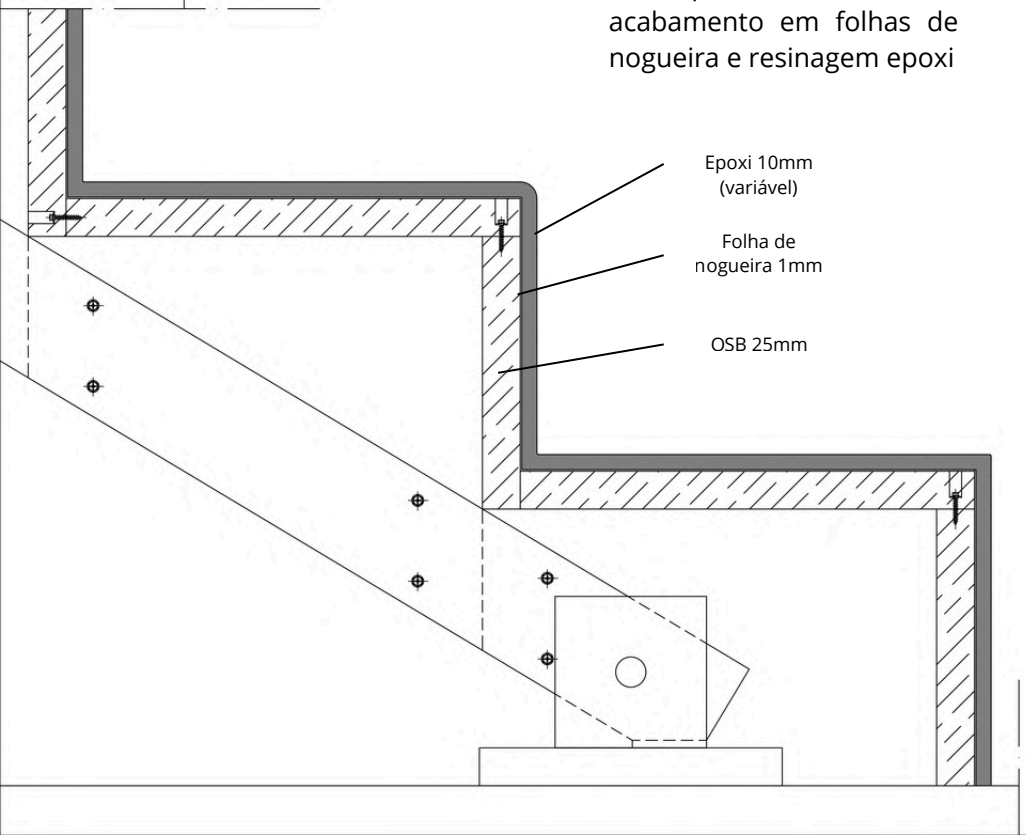


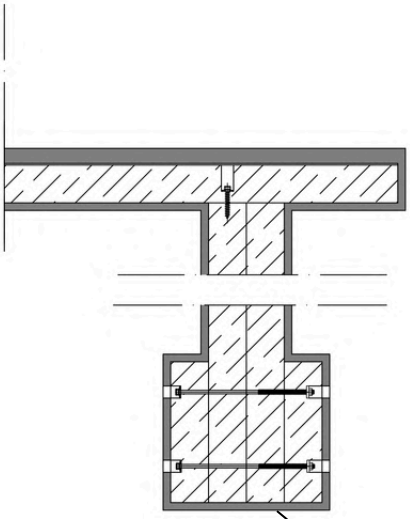
Secção de perfil

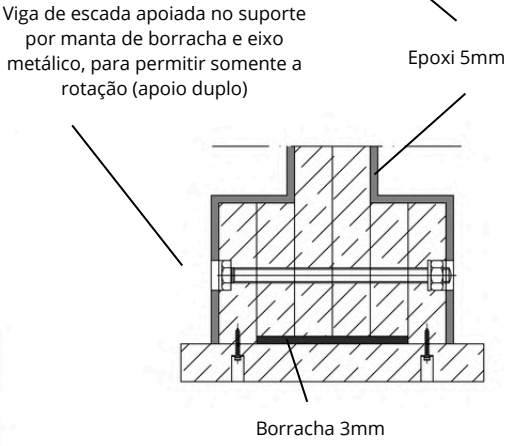




Escadas em OSB, resinadas e aparafusadas, com acabamento em folhas de nogueira e resinagem epoxi







# Jardim

## Plantas e irrigação

No local de menor cota do terreno, um jardim seria usado pela comunidade vindoura e pela existente. Para promover a menor manutenção possivel, seriam usadas plantas autoctones tais como carvalho negreiro e rosmaninho, ademais de se aplicar um método de irrigação segundo práticas presentes em Permacultura, seria necessário (referido há 10 página).
